- Quick learner.
- Adaptable to the environment and surrounding where I live.
- Keeping a positive attitude, regardless of the situation helps with morale.
- The ability to disseminate information and listen actively.

MINI PROJECT

TITLE: Online-Shopping (User Registration)

- Description:
HTML (the Hypertext Markup Language) and CSS (Cascading Style Sheets) are two of the core technologies for building Web pages. HTML provides the structure of the page, CSS the (visual and aural) layout, for a variety of devices.
CSS (Cascading Style Sheets) is used to style and layout web pages — for example, to alter the font, color, size, and spacing of your content, split it into multiple columns, or add animations and other decorative features.
JavaScript (JS) is a lightweight, interpreted, or just-in-time compiled programming language with first-class functions. Front end was created using HTML, CSS, JavaScript. Back end has been connected using PHP, SQL in XAMPP Control panel.
Back-end development means working on server-side software, which focuses on everything you can't see on a website.
